Preface **vii**

1 Generalization of the classical integral forumalae and related inequalities **1**
1.1 General integral identities involving $w-$harmonic sequences of functions 2
1.2 Application to the one-point quadrature formulae 10
1.3 Application to the two-point quadrature formulae 20
1.3.1 Trapezoid formula 24
1.3.2 Newton-Cotes two-point formula 26
1.3.3 Maclaurin two-point formula. Perturbed trapezoid formula. Midpoint formula 28
1.3.4 Legendre-Gauss two-point quadrature formula 35
1.3.5 Chebyshev-Gauss two-point quadrature formula 38
1.3.6 Chebyshev-Gauss formula of the second kind 40
1.3.7 Hermite-Gauss two-point formula 42
1.4 Three-point quadrature formulae 45
1.4.1 Simpson's formula 49
1.4.2 Dual Simpson's formula 49
1.4.3 Maclaurin formula 51
1.4.4 Legendre-Gauss two-point formula 52
1.4.5 Legendre-Gauss three-point formula 57
1.4.6 Chebyshev-Gauss three-point formula 58
1.4.7 Chebyshev-Gauss three-point formula of the second kind 60
1.4.8 Gauss-Hermite three-point formula 62
1.5 Four-point quadrature formulae 64
1.5.1 The closed four-point quadrature formula with precision 3 65
1.5.2 The general Lobatto four-point formula 67

2 Weighted generalizations of the Montgomery identity **71**
2.1 Euler integral formula and Montgomery identity 72
2.1.1 Generalized Montgomery identity and Bernoulli polynomials . . 73
2.1.2 Improvements of Ostrowski type inequalities 78
2.1.3 Estimations of the difference between two weighted integral means 79
2.1.4 Discrete weighted Montgomery identity for infinite series 90

2.1.5 Discrete Ostrowski type inequalities . . . 92
2.1.6 Estimations of the difference of two weighted arithmetic means . 94
2.2 Weighted Euler identities . . . 103
2.2.1 Integral weighted Euler type identities . . . 104
2.2.2 Discrete weighted Euler identity . . . 113
2.2.3 Generalization for n normalized weight functions . . . 127
2.3 Extensions of the Montgomery identity . . . 131
2.3.1 Extension via Taylor's formula (centered at the interval endpoints) with applications . . . 131
2.3.2 Extension via Taylor's formula (centered at the point x) with applications . . . 146
2.3.3 Extensions with applications for α-L-Hölder type functions . . . 157
2.3.4 Extension via Fink identity with applications . . . 168
2.4 Applications for weighted 2-point and 3-point quadrature rules . . . 175
2.4.1 General weighted 2-point and 3-point Radau quadrature rules for functions of bounded variation . . . 178
2.4.2 General weighted two-point Radau and Gauss and three-point Lobatto quadrature rules for functions in L_p spaces . . . 182
2.5 Applications for estimates of approximations for the integral transforms . 188
2.5.1 Error estimates of approximations for the Fourier transform . . . 188
2.5.2 Error estimates of approximations in complex domain for the Laplace transform . . . 199
2.6 Weighted Montgomery identity for Functions of Two Variables . . . 210
2.6.1 Integral weighted Montgomery identities and Ostrowski type inequalities for functions of two variables . . . 210
2.6.2 Discrete weighted Montgomery identity and Ostrowski type inequalities for functions of two variables . . . 212
2.7 Applications for Landau type inequalities . . . 217
2.7.1 Extensions of Landau inequality . . . 217
2.7.2 On Landau type inequalities via Ostrowski inequalities . . . 223

3 Montgomery identity, quadrature formulae and error estimations 233
3.1 Two-point quadrature formulae . . . 234
3.1.1 Introduction . . . 234
3.1.2 Quadrature formulae obtained by a generalization of the Montgomery identity . . . 234
3.1.3 General two-point quadrature formulae with applications for α-L-Hölder type functions . . . 252
3.2 Three-point quadrature formulae . . . 262
3.2.1 Quadrature formulae obtained by a generalization of the Montgomery identity . . . 262
3.2.2 General three-point quadrature formulae with applications for α-L-Hölder type functions . . . 277
3.3 Four-point quadrature formulae. Bullen type inequalities . . . 289

3.3.1 Quadrature formulae obtained by a generalization of the Montgomery identity . . . 290
3.3.2 General four-point quadrature formulae with applications for α-L-Hölder type functions . . . 297

4 Euler harmonic identities for real Borel measures 309
4.1 Euler harmonic identities for measures . . . 310
4.1.1 Introduction . . . 310
4.1.2 Euler identities for measures . . . 313
4.1.3 Some Ostrowski type inequalities . . . 321
4.2 Euler-Grüss type inequalities involving measures . . . 329
4.2.1 Introduction . . . 329
4.2.2 Some inequalities of Grüss type . . . 330
4.2.3 Some Euler-Grüss type inequalities . . . 334
4.3 On an integration-by-parts formula for measures . . . 342
4.3.1 Introduction . . . 342
4.3.2 Integration-by-parts formula for measures . . . 343
4.3.3 Some Ostrowski-type inequalities . . . 346
4.3.4 Some Grüss-type inequalities . . . 351
4.4 Euler harmonic identities and moments of measures . . . 353
4.4.1 Introduction . . . 353
4.4.2 Some integral identities . . . 354
4.4.3 Generalizations of weighted Ostrowski inequality . . . 357
4.4.4 Some Grüss-type inequalities . . . 366
